

IN THE CLAIMS

Please amend the claims as follows:

1. (original) A method of performing a competition between teams by means of at least two sets of modular units, the method comprising the steps of:
 - connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;
 - determining which first modular unit in the first set is connected to which second modular unit or units in the first set;
 - determining which third modular unit in the second set is connected to which fourth modular unit or units in the second set;
 - determining for a set of information items at least one modular unit, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items depends on the way in which said modular units are located relative to one another, and/or a property for each modular unit and/or which first competition is performed;

- distributing the set of information items to the corresponding modular units; and
- presenting said set of information items on the modular units.

2. (original) A method as claimed in claim 1, characterized in that the method further comprises the step of:

- receiving a first information item representing a property of a modular unit.

3. (currently amended) A method according to claim 1 ~~or 2~~, characterized in that the method further comprises the step of:

- receiving a second information item representing a second competition.

4. (currently amended) A method according to ~~any one of claims 1 through 3~~ claim 1, characterized in that the method further comprises the steps of:

- disconnecting a third set of modular units from the first and second set of modular units, wherein said third set comprises at least one modular unit; or
- connecting a fourth set of modular units to said first and second set of modular units, wherein said fourth set comprises at least one modular unit.

5. (currently amended) A computer system for performing the method according to ~~any one of claims 1 through 4~~claim 1.

6. (currently amended) A computer program product comprising program code means stored on a computer readable medium for performing the method of ~~any one of claims 1 through 4~~claim 1 when the computer program is run on a computer.

7. (original) A modular unit for performing a competition between teams by means of at least two sets of modular units, said modular unit comprising:

- means for connecting a first set of modular units to a second set of modular units, wherein each set comprises at least one modular unit;
- means for determining which modular unit is connected to which second modular unit or units in the first and the second set;
- means for determining a set of information items, wherein each information item individually relates to a specific modular unit in said sets; and wherein said set of information items represents competition-related information, and wherein said set of information items depends on the way in which said modular units are located relative to one another in said sets, and/or a

property for each modular unit and/or which first competition is performed;

- means for distributing the set of information items to the corresponding modular units in said sets; and
- means for presenting one of said information items.

8. (original) A modular unit as claimed in claim 7, characterized in that the modular unit further comprises:

- means for receiving a first information item representing a property of a modulator unit.

9. (original) A modular unit according to claim 7, characterized in that the modular unit further comprises:

means for receiving a second information item representing a second competition.
